

The Wilms® Forest Shower

The natural forest shower for more vitality.

For an entirely new and invigorating shower experience, use the Wilms® Forest Shower.

Forest Shower The shower water optionally flows through an easy to replace packet of pine heartwood chips and thus passes the more than 80 natural ingredients of pine heartwood on to the shower water.

- The germ-reducing and highly effective ingredients of the wood are absorbed by the warm skin, thereby strengthening the skin's natural protective barrier. (Tested by University of Greifswald.)
- The pleasant water vapor contains the ideal ingredients to soothe colds and respiratory problems.
- Tiles and other bathroom surfaces are protected by the wood extract. Results:
 - Unique, natural bath environment;
 - The ingredients enter the air as the water evaporates, reducing fungi in every nook and cranny.
- For an effect on the skin the chip bag should be activated after the usual shower procedure.
- Easy replacement of chip bag.
- Various possible natural ingredient combinations.
- Environmentally friendly disposal/no environmentally harmful substances in the water.
- Easy installation without structural modifications.
- The positive effects on Legionella and calcium deposits in the shower head are currently being studied.
- Replace heartwood packet after 30-40 shower processes (duration of use 1 minute per shower process).

Creates a new world in your bathroom!
